

TECHNICAL DATA SHEET

ADENA 6003

Product #AD6003

MICROBIOCIDE

ADENA 6003 is 12.5% solution of DIMET (carbamate biocide). ADENA 6003 is used to control algae and bacteria in recirculating commercial and industrial water cooling towers.

Product Description:

Physical State.....	Liquid
Color.....	Clear light yellow
Odor.....	Pungent sulfite
Specific Gravity.....	1.05
pH.....	11.5

Industrial/Commercial Recirculating Cooling Water Towers:

ADENA 6003 is a product formulated to provide control of the growth of algae and bacteria in recirculating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime, and other deposits. The frequency of subsequent additions depends upon the relative amount of bleed off and the severity of the microbiological problem. Slug additions should be made in the sump of the water cooling towers.

Dosage:

The frequency of feeding and duration of the treatment will depend upon the severity of the problem. Badly fouled systems must be cleaned before treatment is begun. Follow dosage directions on product label for specific application. Consult ADENA TECHNOLOGIES technical staff for continuous feed equipment.

Handling:

ADENA 6003 is an EPA registered product. It must be used and disposed of according to label instructions. Do not contaminate water, food, or feed by storage or disposal. Avoid contact with skin and eyes. Should contact occur, flush immediately with water. If any discomfort persists, seek medical attention. Read relevant Material Safety Data Sheet and product label before handling this product.

Packaging:

ADENA 6003 is packaged in 55, 30 and 5 gallon non-returnable containers.
