

MEGACLEAN is specifically formulated for use in circulation system parts washer equipment. This product provides an economical and effective method for cleaning metal parts. Grease, oil, dirt, sludge, grime, ink, light carbon and similar soils are dissolved after only a few minutes of soaking and brushing. Machine shops, garages, factories, industrial repair shops, and automobile make-ready facilities will find this product to be an ideal compound for use in their recirculating parts washer units. The flash point of over 140°F makes **MEGACLEAN** safer to use and store than conventional petroleum distillate blends.

DIRECTIONS

For optimum results, it is suggested that the parts washer filter be changed or cleaned each time new solvent is added to the system. To extend the solvent's tank life, brush away loose dust and debris from parts before immersion in **MEGACLEAN**. Simply spray solvent onto parts which are to be cleaned. Soak for a few minutes, brush surface with a stiff bristled brush, and rinse with a clean solution of **MEGACLEAN**. Blow dry with compressed air, wipe dry with a shop cloth or allow to air dry. **MEGACLEAN** contains inhibitors to reduce occurrence of flash rusting. Replace with fresh **MEGACLEAN** when required.

Container disposal: Triple rinse container and discard according to local regulations.

CAS Numbers: Aliphatic Petroleum Distillates (64742-47-8).

GENERAL MAINTENANCE PRODUCTS

MEGACLEAN
**Recirculating Parts
Washing Compound**

- Special corrosion inhibitors
- Very low odor
- Dissolves grease, oil, ink, and sludge
- Does not deplete the Ozone
- Flash point of over 141°F

CAUTION: See side panel for precautionary information.
