

5 GALLON PAIL

55 GALLON DRUM

TECH-COAT contains state of the art chemical additives that are incorporated in this product to increase the efficiency of snow removal equipment by plating the blades with hard, diamond-like particles. This reduces friction of the snow and slush against the blade and reduces the power required to remove a greater volume of snow and ice.

DIRECTIONS

Apply with a hand sprayer, paint roller or brush. Apply before a snow removal period. If reapplied at the end of each work period, the equipment will be protected from rust and corrosion during a time of inactivity and be ready to go when next required. A special rust and corrosion inhibitor is part of the formula. Plow may be used immediately after application, but if time permits, a drying time of 20-40 minutes is recommended.

Because of the corrosion resistant properties of the formulation, it is suggested that all snow removal equipment be thoroughly treated at the end of the season. Two light coats, with an hour of drying time between applications should provide good protection. Under severe conditions of storage (in open areas) it may be necessary to re-treat occasionally during the summer months.

DUMP TRUCKS

Spray or brush on load beds of trucks to aid in easy, complete dumping.

CAS Numbers: Water (77732-18-5), Acrylic Emulsion (N/A), Ingredients not toxic under Section 313 of Title III, (SARA) and 40 CFR Part 373.

GENERAL MAINTENANCE PRODUCTS

TECH COAT

Release Coating for Blades and Truck Beds

- Increase Capacity
- Release Agent
- Prevents Sticking And Rust
- Reduces Friction

CAUTION: Do not take internally. See side panel for additional precautionary information.
