

NEUTRA-KLEEN prevents floor finish failure and powdering due to improper neutralization and inadequate rinsings. This product quickly and easily removes heavy accumulations of ugly, insoluble soap scum, hard water film and dangerous alkali ice that has dulled floor surfaces.

NEUTRA-KLEEN keeps hard water minerals soluble so that they do not redeposit and form a dulling film. When added to a bucket of cleaning solution, **NEUTRA-KLEEN** prevents tiring mop drag due to hard water scum, and makes mopping easier, faster and less straining.

NOTE: Do not confuse GMP's **NEUTRA-KLEEN** with other products that may look or claim to be the same. There is only one **NEUTRA-KLEEN**. With substitutes, you may sacrifice user safety or product performance.

DIRECTIONS

Refinishing and restoring floors: Use GMPs **DEEP STRIP** or **SUPER STRIPPER** according to the label directions. Rinse all stripping solutions with clear, cool water. Add 1 part **NEUTRA-KLEEN** to 50 parts water and rinse floor to neutralize any stripping solution that may be left on the floor. Pick up **NEUTRA-KLEEN** solution and re-rinse the floor with clear, cool water.

Damp mopping: Add 1 part **NEUTRA-KLEEN** to 64 parts of **ENHANCE** or **HYDROSOLVE** cleaning solution. This helps to remove ice melter tracking, soap scum and alkali ice. Floors mopped with **NEUTRA-KLEEN** sparkly, have a restored finish and brighter colors.

CAS Numbers: Contains sodium hexametaphosphate (68915-31-1), EDTA, sodium salt (000064-02-8), and phosphate ester(68130-47-2).
