

# HALITE MAG SOLAR SALT

## Economy Ice and Snow Melter

(Product # C975)

- Works Down to 0°
- Provides Corrosion Inhibitor System
- Enhances Rock Salt Performances
- Economically Priced
- Color Coated

**GMP HALITE MAG SOLAR SALT** is blended to provide genuine value. **Screened Three Times and Refined Extra Large Sodium Chloride Crystals (NaCl)** (solar salt) and **Liquid Magnesium Chloride (MgCl<sub>2</sub>)** are blended to coat every crystal and allow **HALITE** to melt down to 0°F. Works twice as fast as Sodium Chloride (rock salt) and other conventional de-icers. The supercharged crystals coated with **MAG** provides a corrosion inhibitor system that reduces the negative impact from corrosion as a result of the usage of rock salt. The Magnesium Chloride also forms a brine residue that works as an anti-icer, which results in no accumulation for the first 2 inches. Also, it does not allow the ice and snow to bond with the asphalt surface. The product is a deep blue color, so you can see where it is spread. **It can be mixed with regular rock salt**, which stops melting at 15°F above zero, and allows it to economically melt down to 0°F. You will also use less of this product than regular rock salt, which will cut down on corrosion on metal surfaces, such as bridges. **HALITE MAG SOLAR SALT** is truly a low cost de-icer that offers great value.

The details are listed below:

PRODUCT #	PRODUCT DESCRIPTION	PRICE
C975	HALITE MAG SOLAR SALT	Pallet=49 Bags Minimum Order of 1 Pallet

### Packaging Available:

2450-Lb/Pallet (49-Bag x 50-Lb) FOB Factory (Minimum Order)

44,100 Lb/Truck Load (882-Bag x 50-lb) 18 Pallets

SOLD EXCLUSIVELY BY:
