

STOP LEAK emergency roof patch is a natural mineral compound that expands into a gel instantly upon contact with water, to make a temporary, leak-proof seal for flat built-up roofs. It is the perfect product for sealing leaking roofs in inclement weather. **STOP LEAK** can be applied even in pouring rain and will move through standing water to stop leaks in minutes. No special equipment is required for handling or pouring. It is non-polluting and will not support flame.

DIRECTIONS: Pour **STOP LEAK** directly from pail into a ½ inch layer over the suspected area of the leak. If the leak does not stop within a couple of minutes pour additional **STOP LEAK**. As long as the **STOP LEAK** stays wet it will continue to seal the leak. When the roof is dry, sweep up the residue and make permanent repairs.

WARNING: **STOP LEAK** emergency roof patch becomes extremely slippery when applied to any surface upon contact with water. Use great caution in moving about. Do not place ladder or tools on the roof area when **STOP LEAK** has been applied. Be sure to remove residue from the roof before making permanent repairs. Water can reactivate the material to again form an extremely slippery surface. Buyer uses the **STOP LEAK** emergency roof patch at his own risk. Sold as is. **GENERAL PRODUCTS SUPPLY, INC.** shall not be liable for incidental or consequential losses, damage or expenses.
